NATIONAL PLANNING AUTHORITY — REPUBLIC OF UGANDA

ACHIEVING HIGHER MIDDLE-INCOME STATUS

Uganda's 10-Fold Growth Strategy

DATA VISUALISATION REPORT

Retreat for NRM Parliamentary Caucuses

National Leadership Institute, Kyankwanzi | April 2026

Prof. Pamela K. Mbabazi | National Planning Authority

15 Data Visualisations covering Vision 2040, NDPIV, ATMS & Programme Targets

CONFIDENTIAL — For Parliamentary Use | Generated April 2026

Table of Contents

1. Executive Overview — Key Strategic Numbers
2. Summary Dashboard — All Key Metrics at a Glance
3. GDP Trajectory: Historical, Baseline & 10-Fold Target
4. Vision 2040 Targets: 9 Indicators, Baseline vs 2040
5. NDP Timeline: Six 5-Year Plans (2010–2040)
6. NDPIV High-Impact Projects by Priority Area
7. NDPIV Macro Outlook Targets (FY2029/30)
8. Agro-Industrialisation Programme Results
9. Tourism Development Programme Results
10. Extractives Industry Programme Results
11. Private Sector Development Programme Results
12. Lending Rate Reduction Targets
13. Innovation, STI & Knowledge Economy Targets
14. ATMS Strategic Priority Revenue Targets
15. Economic Structure Transformation (GDP Composition)
16. Labour Force Transformation

1. Executive Overview — Key Strategic Numbers

Uganda's ambition: 10× GDP growth in 15 years | Vision 2040 | NDPIV

CURRENT GDP	10-FOLD TARGET	NDPIV GDP TARGET	PER CAPITA TARGET
USD 60bn	**USD 600bn**	**USD 158bn**	**USD 9,500**
FY 2024/25 baseline	By 2040 (Vision 2040)	Doubled by FY 2029/30	Up from USD 800 in 2010

ANNUAL JOBS TARGET	TOURISM TARGET	POVERTY TARGET	GDP GROWTH TARGET
885,000	**USD 10bn**	**12.9%**	**10.1%**
Per year by FY 2029/30	Forex earnings (from USD 1bn)	Down from 19.5% by 2029/30	Double-digit by FY 2029/30

ATMS AGRO TARGET	ATMS TOURISM	ATMS MINERALS	FDI TARGET
USD 20bn+	**USD 50bn+**	**USD 25bn+**	**USD 50bn/yr**
Agro-based manufacturing	Tourism inflows target	Mineral-based manufacturing	Up from USD 2.9bn in 2022

Uganda's Vision 2040 sets a transformative ambition: from a predominantly low-income economy to a competitive upper-middle-income country within 30 years, growing GDP from USD 17 billion (2010) to USD 580.5 billion by 2040. Halfway through this journey, the government has acknowledged that the pace of growth at a 7% average is insufficient. The 10-Fold Growth Strategy was therefore developed under H.E. the President's guidance to accelerate this transformation — requiring the economy to grow ten times (from USD 60bn to USD 600bn) within 15 years. The Fourth National Development Plan (NDPIV) is the first plan to operationalise this strategy, targeting a doubling of GDP to USD 158 billion by FY 2029/30.

2. Summary Dashboard — All Key Metrics at a Glance

A single-page overview of GDP trajectory, ATMS targets, sector structure and macro outlook

Figure 1: Summary dashboard combining GDP trajectory, ATMS revenue targets, GDP sector composition shift, labour force transformation, and NDPIV macro targets. All data sourced from the NPA presentation at Kyankwanzi, April 2026.

Reading the dashboard: The top KPI cards show the most critical strategic numbers. The GDP trajectory chart (top-left) illustrates the gap between Uganda's 7% baseline growth path and the 10-fold target. The ATMS bar chart (top-right) shows the USD 95bn+ combined revenue target anchoring the growth strategy. The bottom row shows the structural transformation required — agriculture's share of GDP must fall from 53% to 10%, while industry must triple to 31%.

3. GDP Trajectory: Historical, Baseline & 10-Fold Target

Uganda GDP from USD 17bn (2010) → USD 60bn (2025) → USD 600bn (2040 target)

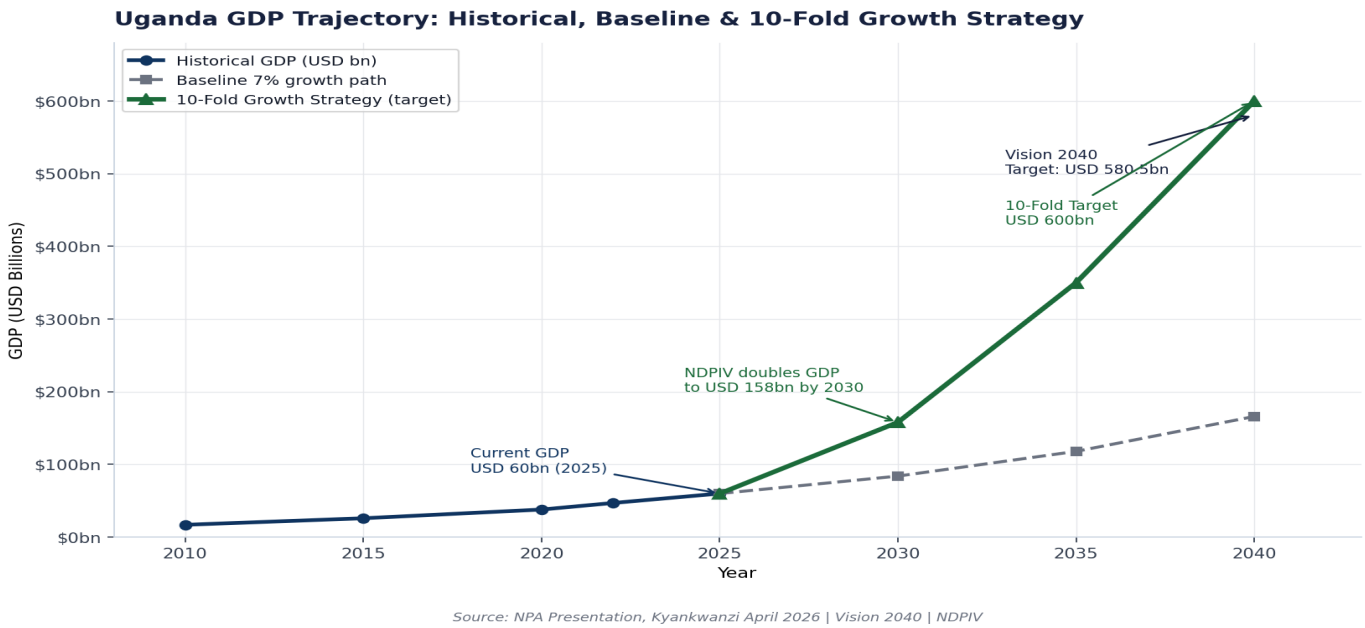

Figure 2: Uganda GDP trajectory showing historical growth (navy), 7% baseline projection (grey, dashed), and the 10-Fold Growth Strategy target path (green). NDPIV aims to double GDP to USD 158bn by FY2029/30 as the first milestone.

The chart presents three scenarios for Uganda's GDP growth trajectory between 2010 and 2040:

- **Historical (navy line):** Uganda grew from USD 17bn in 2010 to approximately USD 60bn in 2025, averaging around 7% per year — solid but insufficient for Vision 2040.
- **Baseline 7% path (grey dashed):** If Uganda continues at its historical average rate, GDP reaches approximately USD 166bn by 2040 — far short of the USD 580.5bn Vision 2040 target.
- **10-Fold Growth Strategy (green):** Requires accelerating to double-digit growth, reaching USD 158bn by 2030 (NDPIV milestone), USD 350bn by 2035, and USD 600bn by 2040.

The gap between the baseline and the 10-fold path represents the 'implementation gap' that NDPIV's structural reforms, ATMS investments, and policy consensus aim to close. This is explicitly described in the NPA presentation as requiring 'business unusual' — a fundamental shift in how government plans and delivers.

4. Vision 2040 Targets: 9 Indicators, Baseline vs 2040

Ambitious but achievable — quantified targets set in 2010 for the 2040 horizon

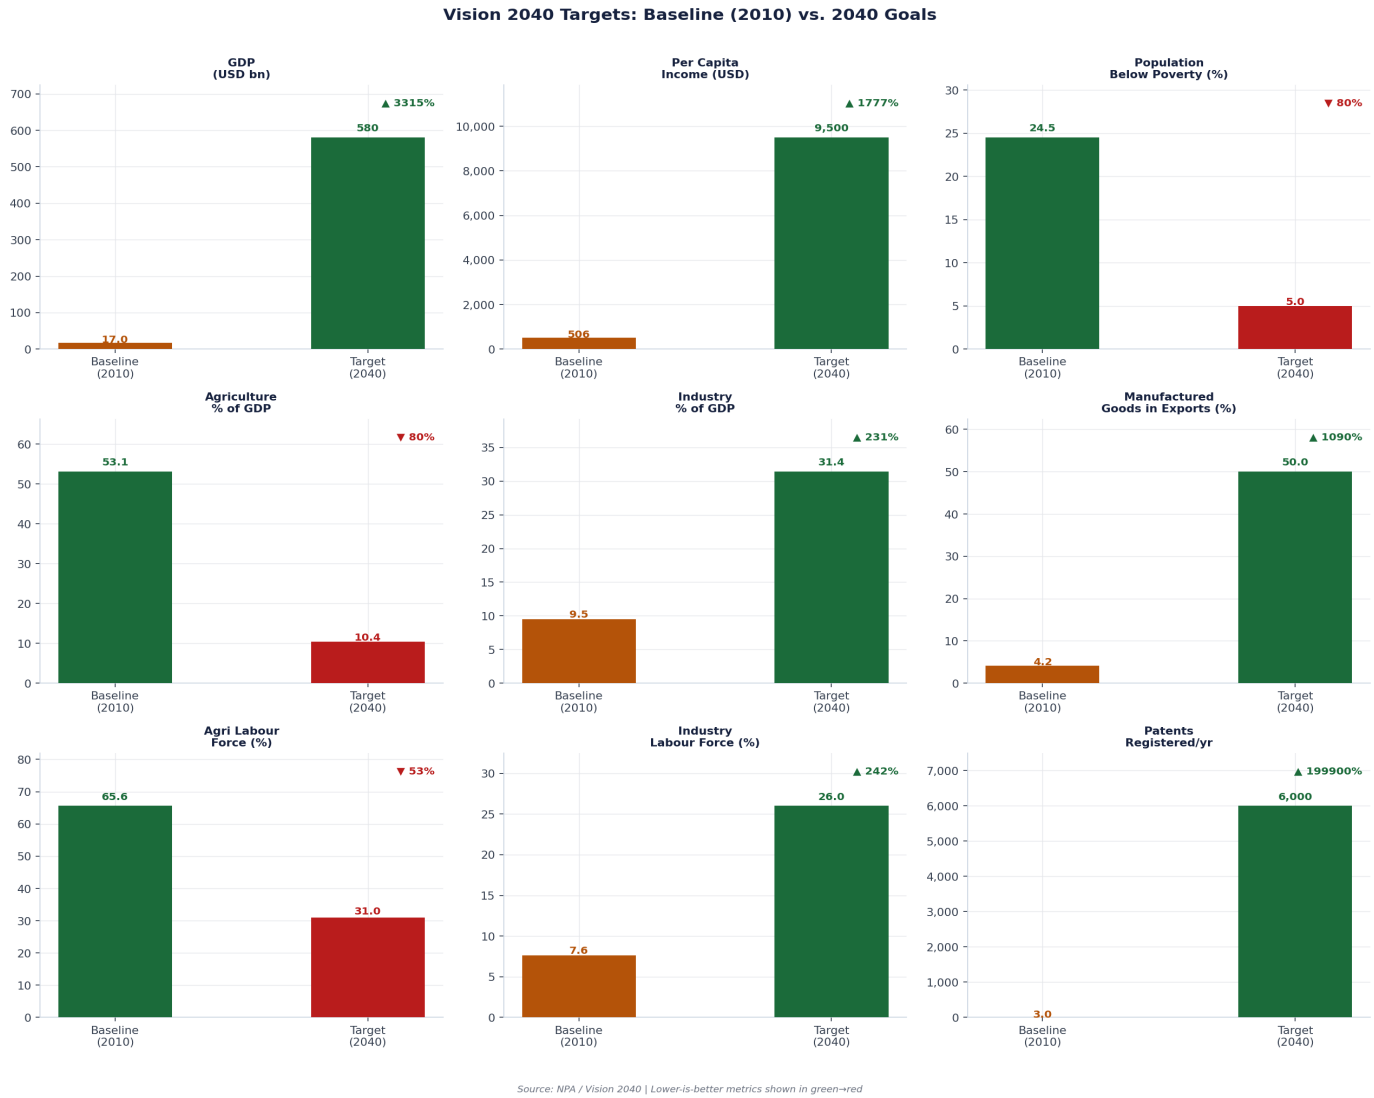

Figure 3: Nine Vision 2040 target indicators comparing the 2010 baseline to 2040 goals. Green bars indicate improvement targets; red bars indicate reduction targets (poverty, agri-share). Percentage change shown top-right of each panel.

Vision 2040 translates Uganda's transformation aspiration into nine measurable indicators:

Indicator	Baseline (2010)	Target (2040)	Change
GDP (USD bn)	17	580.5	+3,315%
Per Capita Income (USD)	506	9,500	+1,778%
Population below poverty (%)	24.5%	5%	-80%
Agriculture % of GDP	53.1%	10.4%	-80%
Industry % of GDP	9.5%	31.4%	+231%
Manufactured goods in exports	4.2%	50%	+1,090%
Agriculture labour force (%)	65.6%	31%	-53%

Industry labour force (%)	7.6%	26%	+242%
Patents registered per year	3	6,000	+199,900%

The most dramatic targets are the 2,000× increase in patents (reflecting the innovation economy ambition) and the near-10× growth in per capita income. Agriculture's GDP contribution must shrink from majority-dominant (53%) to a minor share (10%), mirroring the structural transformation seen in East Asian development models.

5. NDP Timeline: Six 5-Year Plans (2010–2040)

Uganda's Comprehensive Integrated National Development Planning Framework — three phases

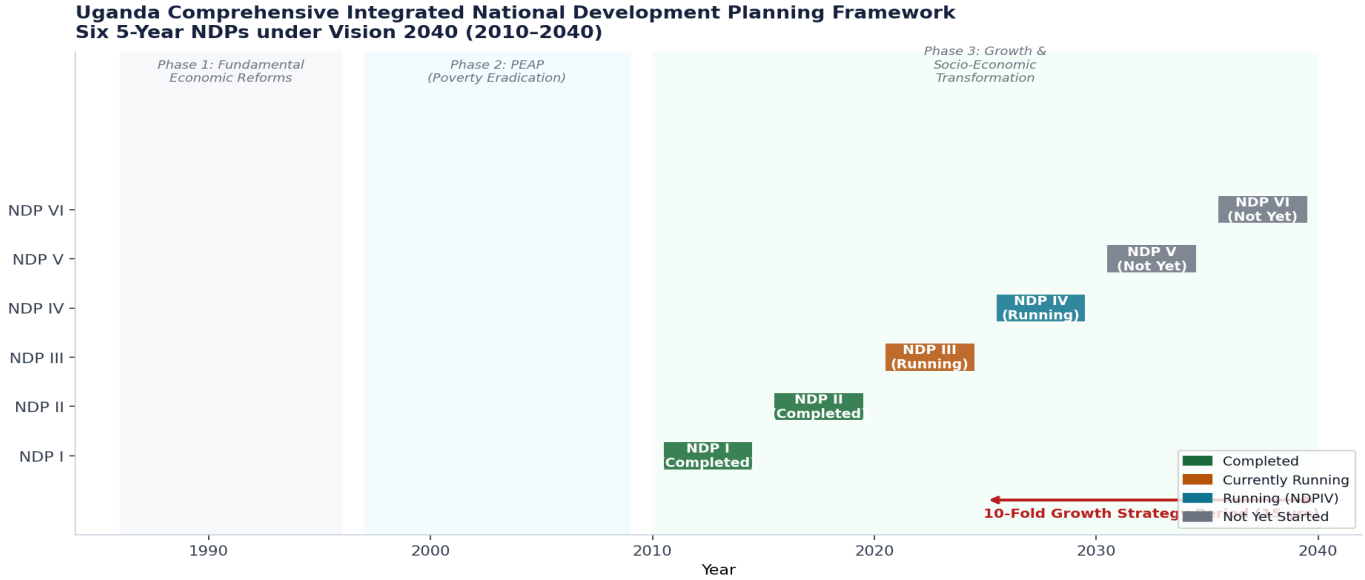

Figure 4: Gantt-style NDP timeline across three governance phases (1986–2040). NDPI–III are complete; NDPIV is running. The 10-Fold Growth Strategy period spans the last 15 years (2025–2040).

Uganda's development planning has evolved through three distinct phases:

- **Phase 1 — Fundamental Economic Reforms (1986–1996):** Focused on economic recovery, structural reforms and restoring macroeconomic stability following decades of conflict. Significant recovery achieved, though challenges of low agricultural productivity and unemployment persisted.
- **Phase 2 — Poverty Eradication Action Plan / PEAP (1997–2009):** Expanded public services and focused on poverty reduction. Poverty fell from around 56% (late 1980s) to 24.5% by 2010. However, the economy remained less competitive due to under-developed infrastructure and low human capital.
- **Phase 3 — Growth and Socio-Economic Transformation (2010–present):** Implementation of six 5-year NDPs under the Comprehensive National Development Planning Framework (CNDPF). NDPI, II, and III built the infrastructure and human capital foundation. NDPIV now delivers the 10-Fold Strategy.

The 10-Fold Growth Strategy period covers the final 15 years of Vision 2040 (2025–2040), encompassing NDPIV, NDP V, and NDP VI. NDPIV alone is expected to double the economy.

6. NDPIV High-Impact Projects by Priority Area

63 high-impact projects distributed across 12 priority areas and programmes

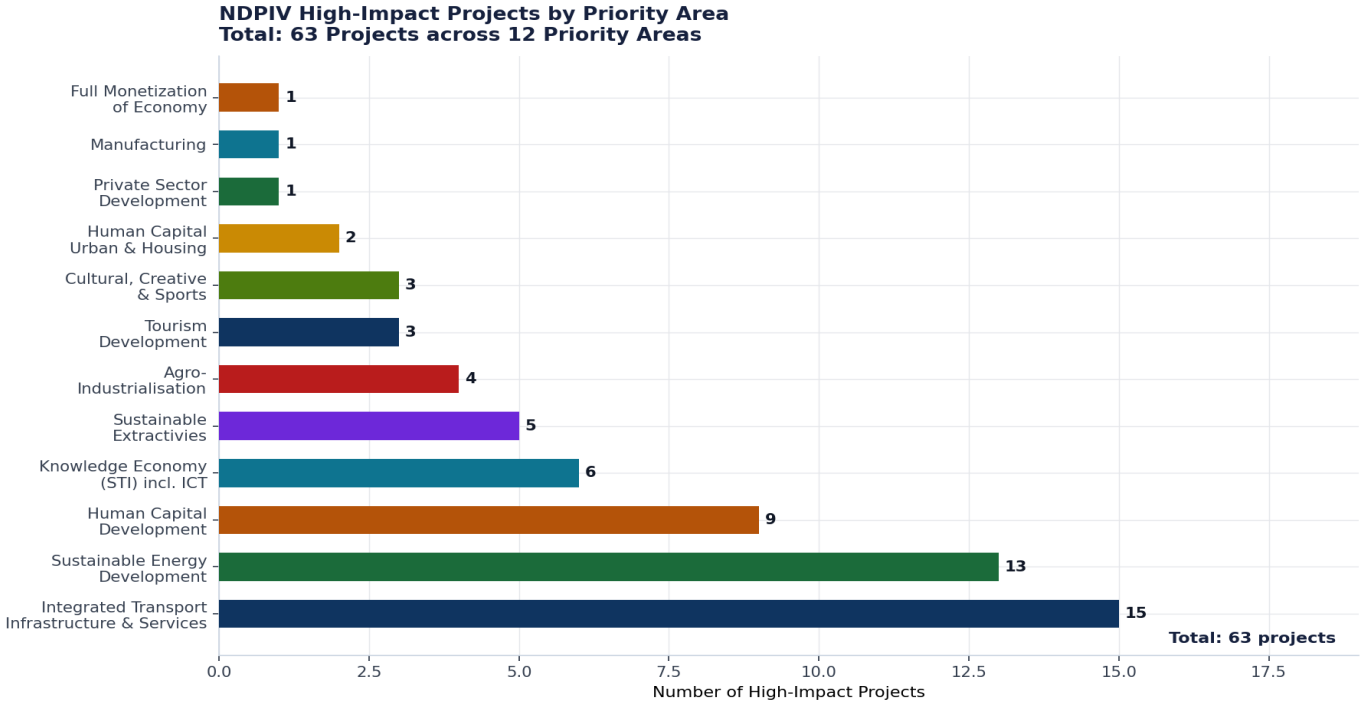

Figure 5: NDPIV's 63 high-impact projects by priority area. Transport (15) and Energy (13) lead — reflecting the infrastructure foundation required for all other sectors.

NDPIV identifies 63 high-impact projects as the investment anchors of the 10-Fold Growth Strategy:

Priority Area	No. of Projects	% of Total
Integrated Transport Infrastructure	15	23.8%
Sustainable Energy Development	13	20.6%
Human Capital Development	9	14.3%
Knowledge Economy (STI) incl. ICT	6	9.5%
Sustainable Extractives	5	7.9%
Agro-Industrialisation	4	6.3%
Cultural, Creative & Sports	3	4.8%
Tourism Development	3	4.8%
Sustainable Urbanisation & Housing	2	3.2%
Private Sector Development	1	1.6%
Full Monetization of Economy	1	1.6%
Manufacturing	1	1.6%
TOTAL	63	100%

Key flagship projects include the Hoima Oil Refinery, East Africa Crude Oil Pipeline (EACOP), Kampala–Malaba Standard Gauge Railway, Busega–Mpigi and Kampala–Jinja Expressways, Development of Bukasa Port, Solar-powered Irrigation Systems, and integrated AFCON projects. Transport and energy together account for 44% of all high-impact projects — reflecting the enabling infrastructure logic of NDPIV.

7. NDPIV Macro Outlook Targets (FY 2029/30)

Six headline KPIs to be achieved by the end of NDPIV

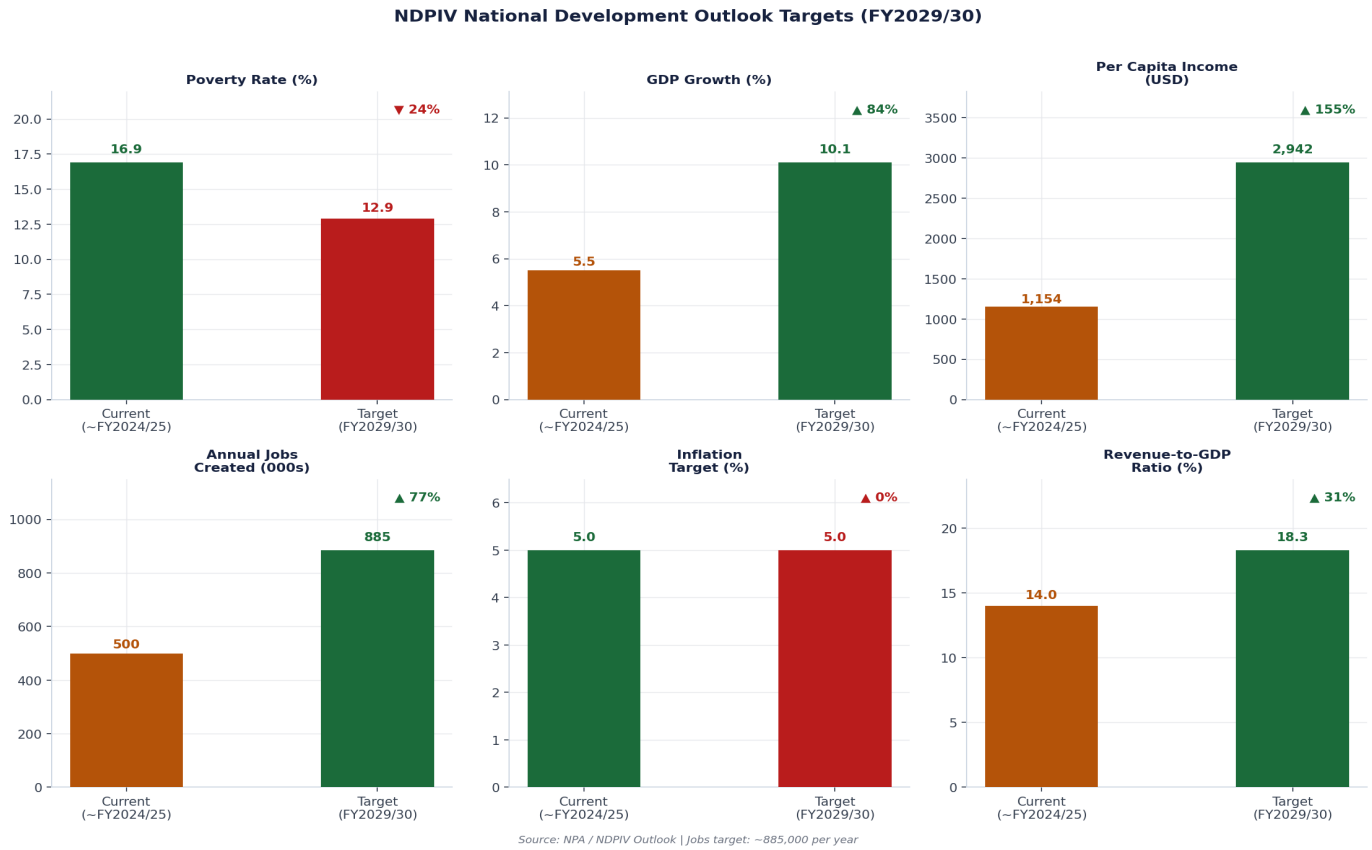

Figure 6: NDPIV macro outlook targets — current versus FY2029/30 goals. GDP growth target doubles from ~5.5% to 10.1%; per capita income more than doubles from USD 1,154 to USD 2,942; poverty falls from 16.9% to 12.9%.

NDPIV sets six binding macro-level outcome targets to be achieved by FY 2029/30:

Indicator	Current (~FY2024/25)	NDPIV Target (FY2029/30)	Direction
Poverty Rate	16.9%	12.9%	Reduce by 4pp
GDP Growth Rate	~5.5%	10.1%	Double to double-digit
Real Per Capita Income (USD)	USD 1,154	USD 2,942	+155%
Annual Jobs Created	~500,000	885,000	+77%
Inflation Target	~5%	5% (±3%)	Maintain stability
Revenue-to-GDP Ratio	~14%	18.3%	+4.3pp

The revenue-to-GDP target of 18.3% is particularly significant — it underpins the fiscal realism of the plan. Domestic Resource Mobilisation (DRM) reforms include local service taxes, prohibition of large cash transactions, and extending income tax to all income sources including farmers. Creating 885,000 jobs annually (up from ~500,000) is critical to absorbing Uganda's young, rapidly growing labour force.

8. Agro-Industrialisation Programme Results

Targeting USD 20bn+ | 6 priority value chains: Dairy, Sugar, Coffee, Vegetable Oils, Cassava & Fish

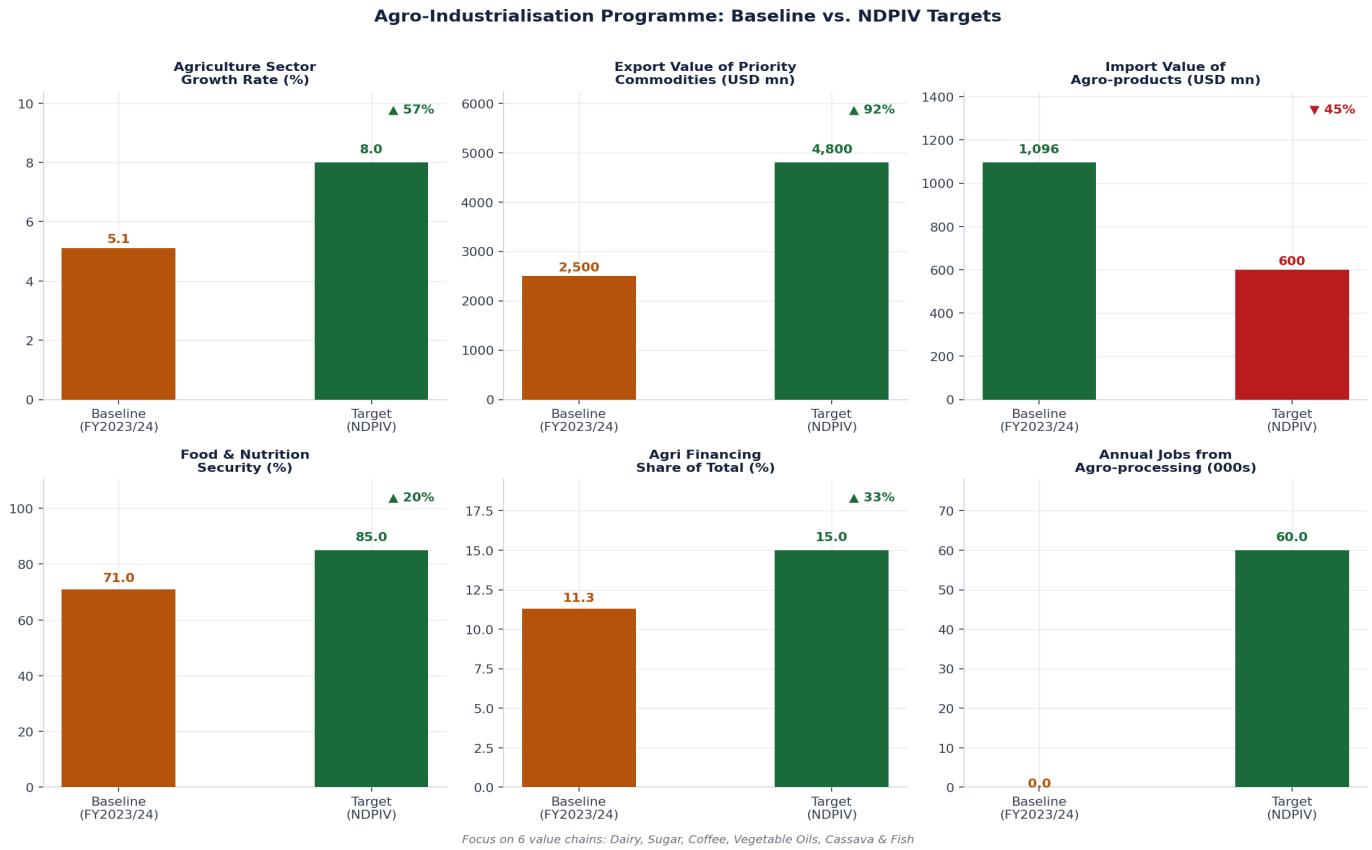

Figure 7: Agro-Industrialisation programme — six outcome indicators comparing FY2023/24 baseline to NDPIV targets. Notable: agricultural growth rate target nearly doubles (5.1% to 8%); import substitution goal cuts agro-product imports nearly in half.

Agro-industrialisation is the first 'A' in ATMS and the foundation of Uganda's export diversification strategy. The programme focuses on six priority value chains and targets the following outcomes:

Result Indicator	Baseline (FY2023/24)	NDPIV Target	Change
Agriculture sector growth rate	5.1%	8.0%	+2.9pp
Export value — priority commodities (USD)	USD 2.5mn	USD 4.8mn	+92%
Import value of agro-products (USD mn)	USD 1,096mn	USD 600mn	-45%
Yield of priority commodities	Baseline	+50%	+50%
Jobs from agro-processing annually	N/A	60,000	New target
Food & nutrition security	71%	85%	+14pp
Agricultural financing share	11.3%	15%	+3.7pp

Key programme accelerators include: the Parish Development Model (PDM) roadmap for commercialising and formalising farming; land reforms to end fragmentation; transformation of the Agricultural Credit Facility (ACF) into an independent fund with an equity component; further capitalisation of UDB and UDC; and establishment of a National Trading Company to drive agro-exports within the African Continental Free Trade Area (AfCFTA).

9. Tourism Development Programme Results

Targeting USD 50bn+ in inflows — the largest single ATMS revenue target

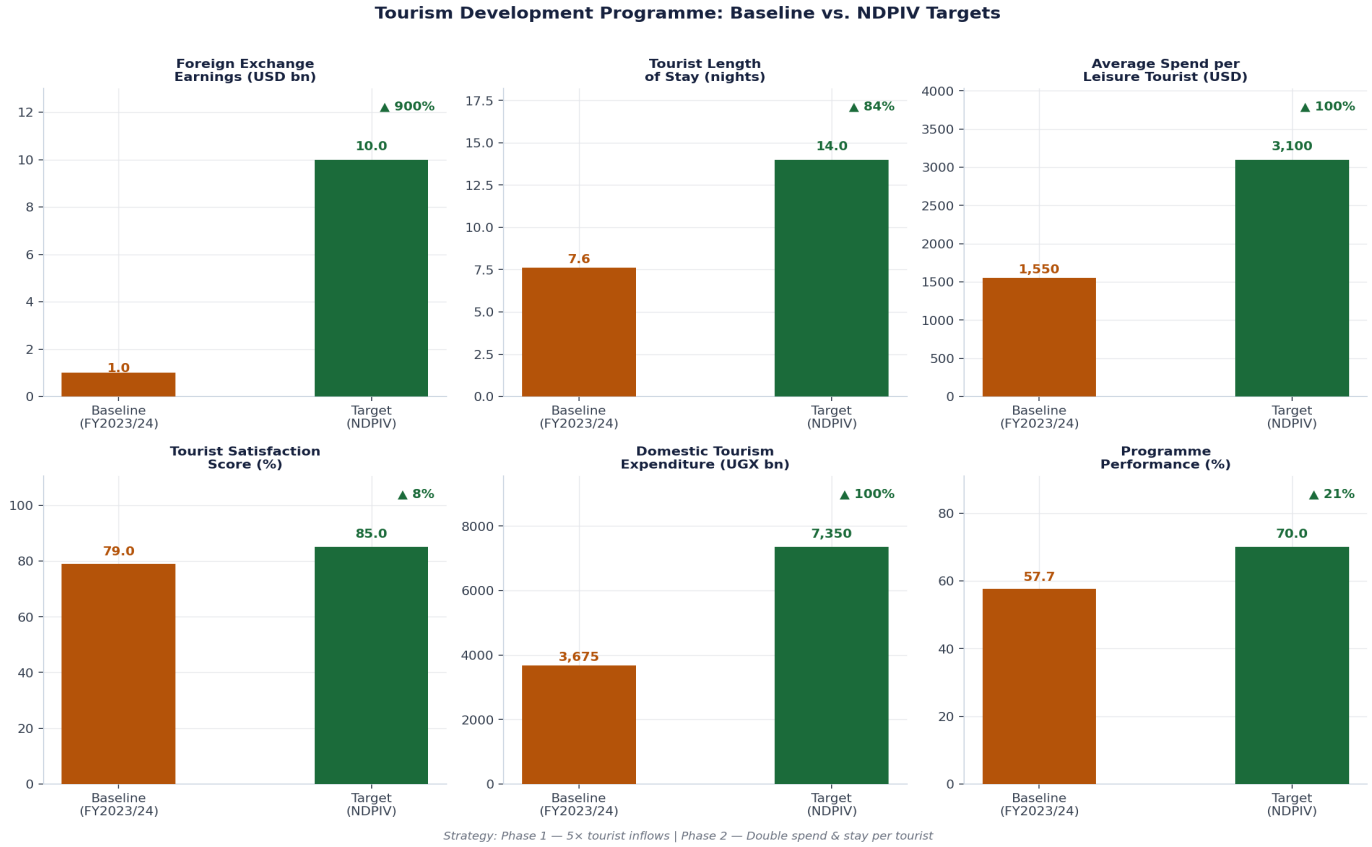

Figure 8: Tourism programme results — six indicators from FY2023/24 baseline to NDPIV targets. Foreign exchange earnings target is 10× the baseline (USD 1bn to USD 10bn). Average tourist stay doubles from 7.6 to 14 nights.

Tourism is the 'T' in ATMS and carries the highest single revenue target at USD 50bn+. The two-phase strategy: Phase 1 — increase tourist inflows 5-fold at current spend/stay; Phase 2 — double average spend and length of stay per tourist.

Result Indicator	Baseline (FY2023/24)	NDPIV Target	Change
Foreign exchange earnings	USD 1.0bn	USD 10.0bn	+900%
Tourist length of stay (nights)	7.6	14	+84%
Average spend per leisure tourist (USD)	USD 1,550	USD 3,100	+100%
Tourist satisfaction score	79%	85%	+6pp
Domestic tourism expenditure (UGX bn)	UGX 3,675bn	UGX 7,350bn	+100%
Programme performance score	57.7%	70%	+12.3pp

Accelerator actions include: hotel rating and certification standards; developing MICE (Meetings, Incentives, Conferences & Exhibitions) and sports facilities including AFCON27; tourism circuits for oil & gas and military museums; agro-tourism in rural areas; and health & education tourism through centres of excellence.

10. Extractives Industry Programme Results

Minerals (incl. Oil & Gas) — Targeting USD 25bn+ | First Oil delivery is NDPIV's anchor project

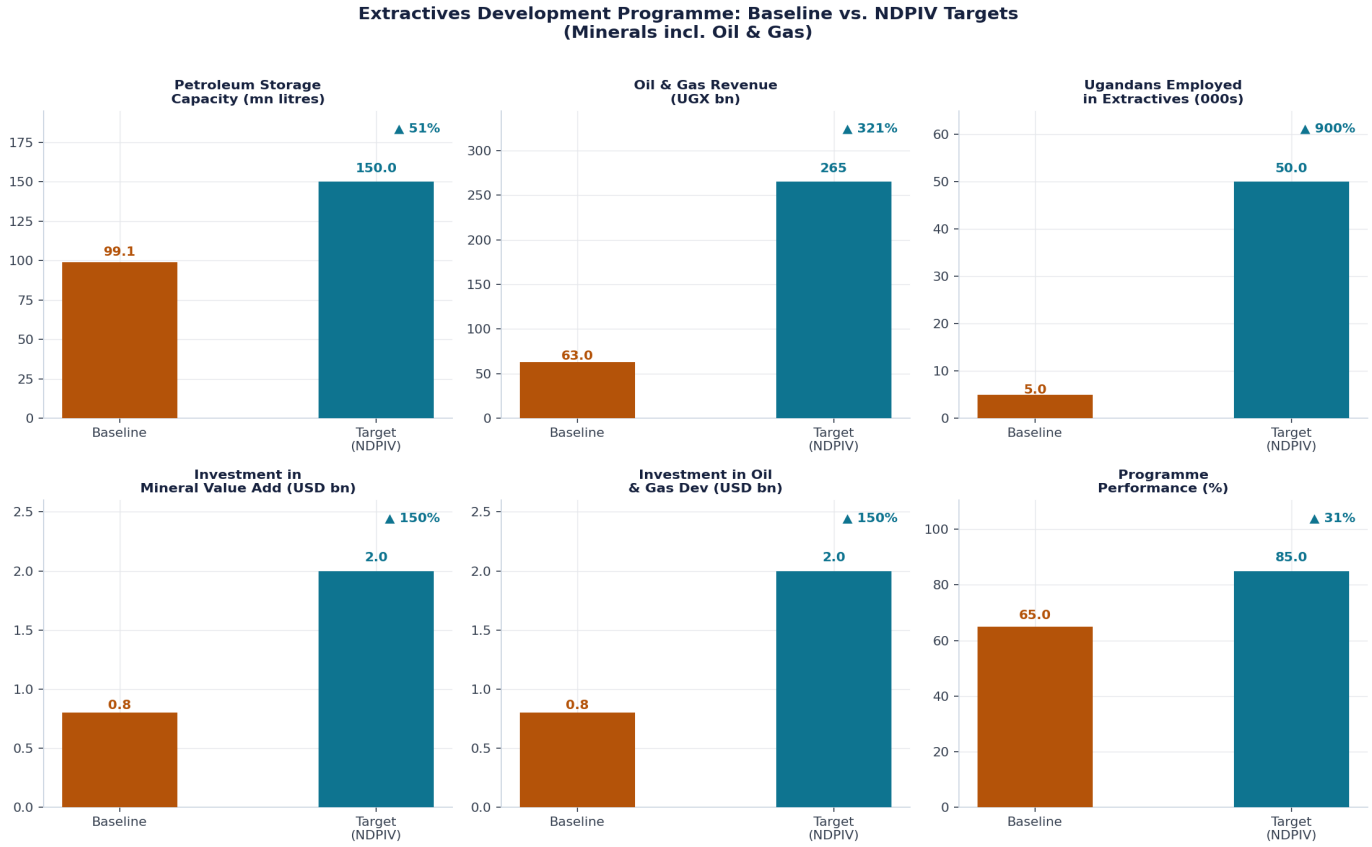

Figure 9: Extractives industry programme — six outcome indicators. Employment in extractives targets a 10× increase (5,000 to 50,000). Oil and gas revenue grows from UGX 62.98bn to UGX 265bn.

Result Indicator	Baseline	NDPIV Target	Change
Petroleum storage capacity (mn litres)	99.1	150	+51%
Oil & gas revenue (UGX bn)	UGX 62.98bn	UGX 265bn	+321%
Ugandans employed in extractives	5,000	50,000	+900%
Investment in mineral value addition	USD 0.8bn	USD 2bn	+150%
Investment in oil & gas development	USD 0.8bn	USD 2bn	+150%
Programme performance	65%	85%	+20pp

Three flagship projects anchor the extractives programme: EACOP (East Africa Crude Oil Pipeline), the Hoima Oil Refinery, and the Kampala Storage Terminal. Downstream, Phase 1 petrochemical products include mass access to LPG for cooking fuel, bitumen for road construction, petroleum coke for fertiliser manufacturing, and ethylene for polyethylene materials. The Kabalega International Airport and Kabalega Industrial Park are critical enabling infrastructure.

11. Private Sector Development Programme Results

Reducing informality, cost of doing business, and growing Uganda's export base

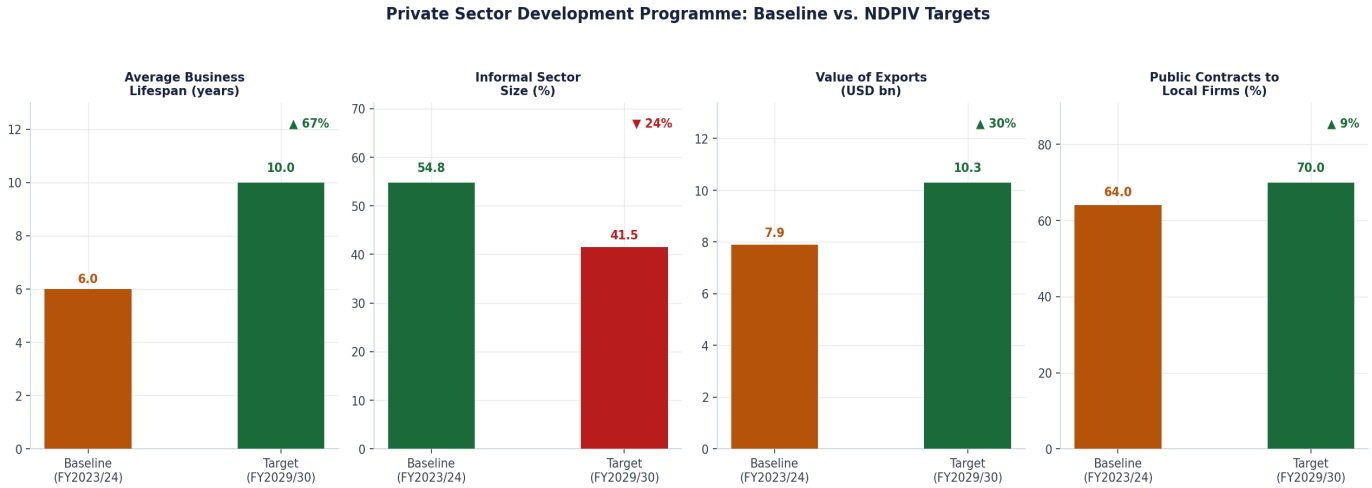

Figure 10: Private Sector Development — four outcome indicators. Business lifespan targeted to grow from 6 to 10 years; informal sector shrinks from 54.8% to 41.5%.

Result Indicator	Baseline (FY2023/24)	Target (FY2029/30)	Change
Average business lifespan (years)	6	10	+67%
Informal sector size	54.8%	41.5%	-13.3pp
Value of exports (USD bn)	USD 7.9bn	USD 10.3bn	+30%
Public contracts awarded to local firms	64%	70%	+6pp

With over half the economy operating informally (54.8%), formalisation is one of the most critical private sector reforms. NDPIV targets a 13 percentage-point reduction in informality through mandatory employment returns, prohibition of undocumented transactions, and extending income tax compliance to all sectors. The 10-year business lifespan target (up from 6 years) reflects improved access to affordable credit, better business development services, and a more competitive enabling environment.

12. Lending Rate Reduction Targets

Cost of credit is a binding constraint — targeted reductions across all institution types

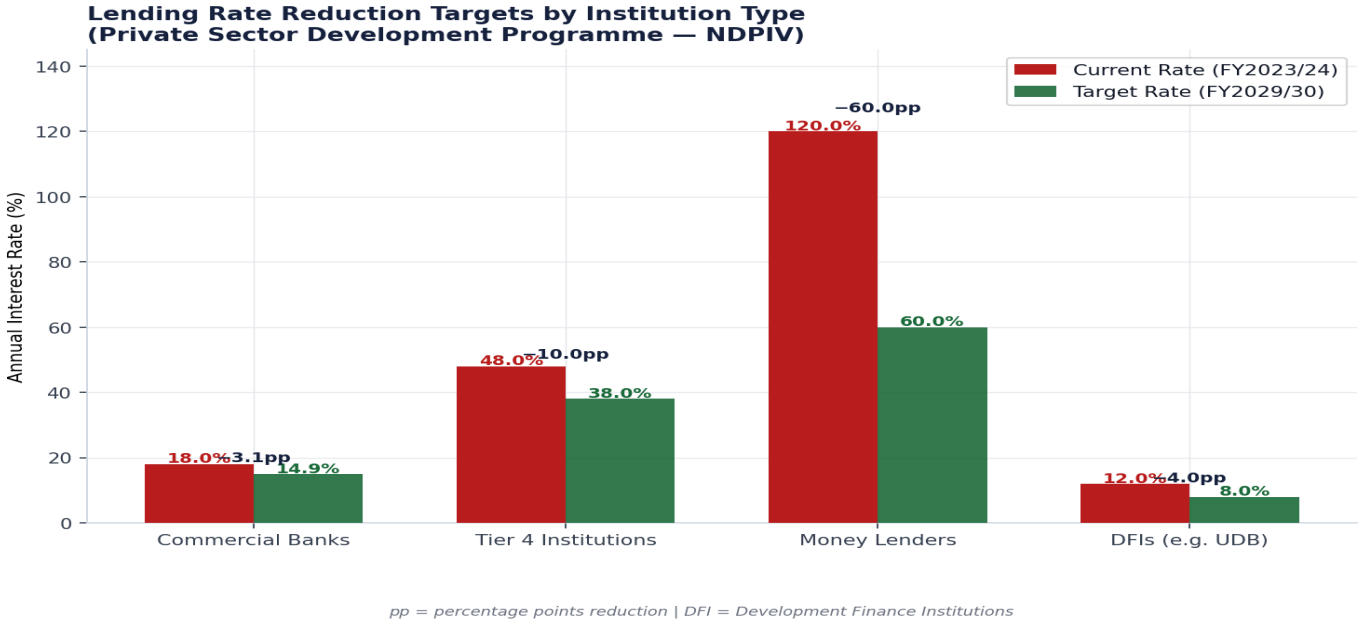

Figure 11: Lending rate reduction targets by institution type. Money lenders (120% → 60%) and Tier 4 institutions (48% → 38%) carry the largest absolute reductions. DFIs (e.g. UDB) target a reduction from 12% to 8% — critical for industrial investment.

Institution Type	Current Rate	NDPIV Target	Reduction
Commercial Banks	18.0%	14.9%	–3.1pp
Tier 4 Institutions	48.0%	38.0%	–10.0pp
Money Lenders	120.0%	60.0%	–60.0pp
DFIs (e.g. UDB)	12.0%	8.0%	–4.0pp

High lending rates — especially the 120% charged by money lenders who serve Uganda's most financially excluded citizens — represent one of the most severe structural barriers to wealth creation. The strategy to reduce rates includes: further capitalising UDB and UDC; promoting non-bank financing through capital markets and a commodities exchange; expanding SACCO and Tier 4 institution reach; and reducing the risk premium through improved contract enforcement and business formalisation.

13. Innovation, STI & Knowledge Economy Targets

The 'S' in ATMS — a multiplier across all other sectors, not a standalone revenue target

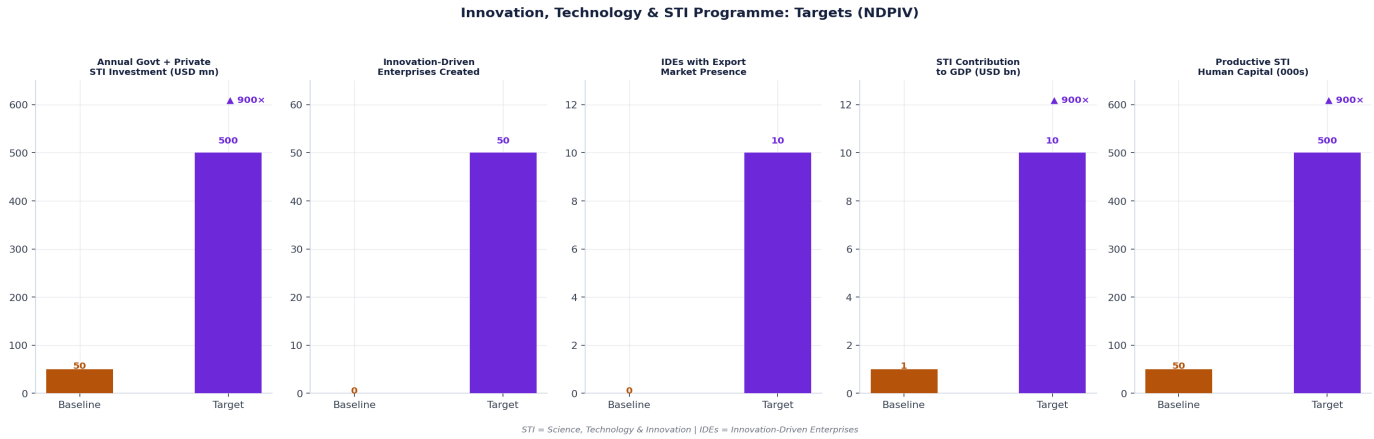

Figure 12: STI programme targets. Annual government + private STI investment must reach USD 500mn; 500,000 productive STI professionals to be developed; 50 Innovation-Driven Enterprises to be created with 10 on export markets.

Result Indicator	Approx. Baseline	NDPIV Target	Change
Govt + Private STI investment (USD mn/yr)	~USD 50mn	USD 500mn	+900%
Innovation-Driven Enterprises (IDEs)	~0	50	New
IDEs with export market presence	~0	10	New
STI contribution to GDP (USD bn)	~USD 1bn	USD 10bn	+900%
Productive STI human capital	~50,000	500,000	+900%

STI is positioned as the 'multiplier' across ATMS — innovations in agriculture reduce post-harvest losses; digital infrastructure enables financial inclusion; biotech advances healthcare. Key actions include: establishing 4 National Science & Technology Parks; mainstream ICT across all education levels and government services; fast-tracking the Genetic Engineering Regulatory Bill; and transitioning public R&D; funding to a competitive grants model. The Vision 2040 target of 6,000 patents per year (up from 3 in 2010) signals the scale of the knowledge economy ambition.

14. ATMS Strategic Priority Revenue Targets

Combined target: USD 95bn+ across the four ATMS pillars — anchoring the 10-Fold Strategy

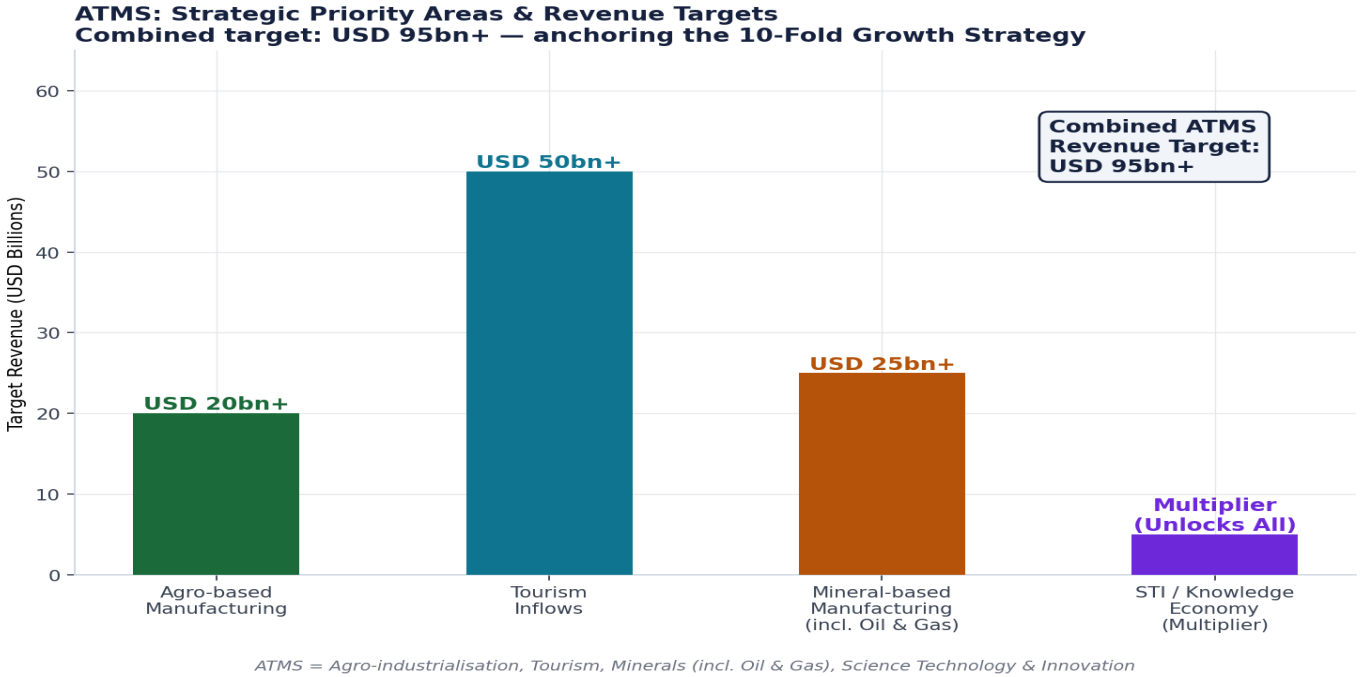

Figure 13: ATMS revenue targets. Tourism leads at USD 50bn+, followed by Minerals (USD 25bn+) and Agro-based Manufacturing (USD 20bn+). STI acts as a cross-cutting multiplier rather than carrying a standalone revenue target.

ATMS — Agro-industrialisation, Tourism, Minerals (incl. Oil & Gas), and Science Technology & Innovation — are the four strategic priorities identified in Vision 2040 around which Uganda's abundant opportunities will be harnessed. Combined, A+T+M alone target USD 95bn+ in annual revenues, dwarfing Uganda's current USD 60bn GDP:

ATMS Pillar	Revenue Target	Key Enablers
A — Agro-based Manufacturing	USD 20bn+	PDM, ACF, 6 value chains, irrigation
T — Tourism Inflows	USD 50bn+	AFCON, MICE, circuit development, standards
M — Mineral-based Manufacturing	USD 25bn+	EACOP, refinery, SGR, mining formalisation
S — STI / Knowledge Economy	Multiplier	4 STI parks, IDEs, ICT, biotech, R&D grants
COMBINED (A+T+M)	USD 95bn+	Exceeds current GDP of USD 60bn

The realisation of ATMS targets is contingent on the quality of enabling infrastructure (energy, transport, ICT), the effectiveness of land reforms, domestic resource mobilisation, and — critically — the shift from policy reform to implementation ('business unusual') that NDPIV explicitly demands.

15. Economic Structure Transformation — GDP Composition

Agriculture must shrink from 53% to 10% of GDP; Industry must triple from 9.5% to 31.4%

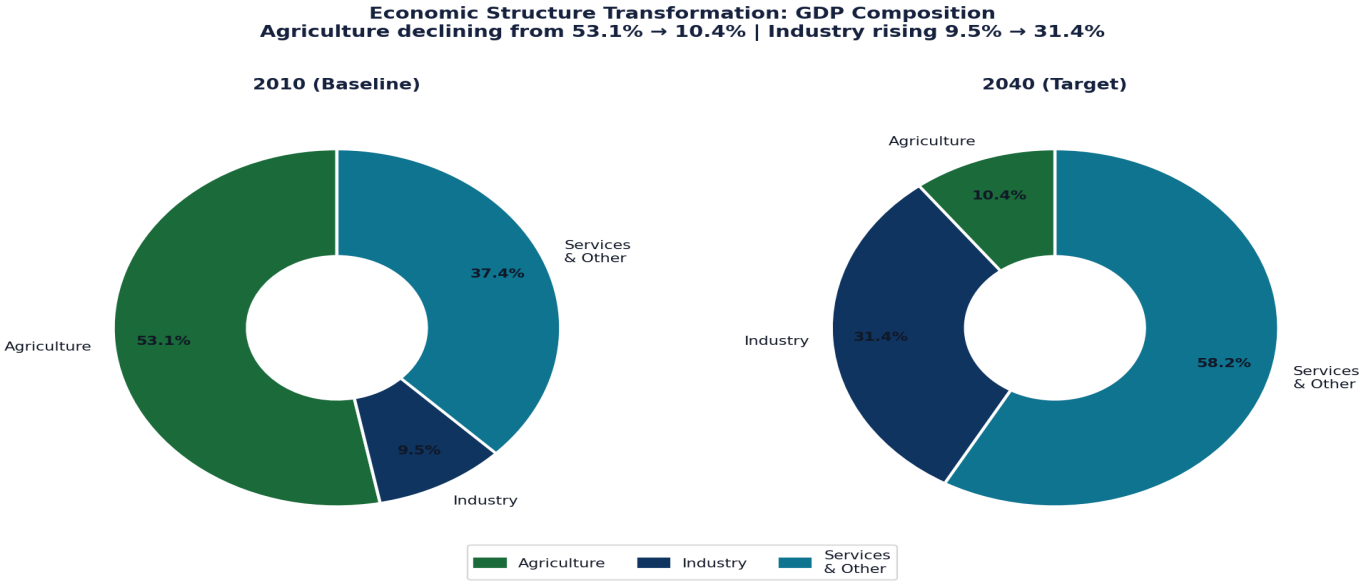

Figure 14: GDP sector composition — 2010 baseline vs 2040 target. The structural transformation requires agriculture's dominance to be replaced by industry and services, mirroring the development paths of East Asian economies.

One of the most fundamental changes required by Vision 2040 is a transformation in the structure of Uganda's economy. In 2010, agriculture dominated GDP at 53.1% — typical of a least-developed, agrarian economy. By 2040, the plan requires a near-complete structural reversal:

Sector	2010 Baseline (% of GDP)	2040 Target (% of GDP)	Shift
Agriculture	53.1%	10.4%	–42.7pp
Industry	9.5%	31.4%	+21.9pp
Services & Other	37.4%	58.2%	+20.8pp

This structural transformation is not automatic — it requires deliberate policy interventions: agro-industrialisation to shift farmers from subsistence to commercial production; industrial parks and export processing zones to grow manufacturing; and a knowledge economy to underpin high-value services. The shift mirrors patterns seen in South Korea, Taiwan, and Malaysia, where agriculture's GDP share fell from majority to single digits over 30–40 years of deliberate industrialisation.

16. Labour Force Transformation

65.6% of workers in agriculture must fall to 31% — creating 885,000 new jobs annually

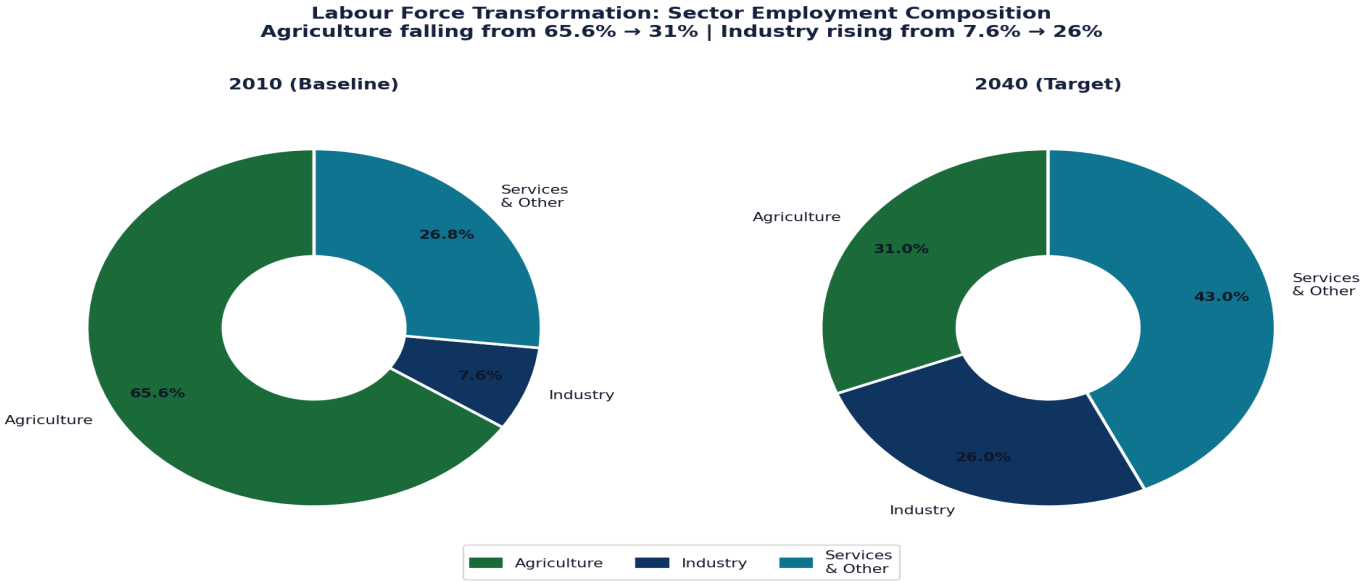

Figure 15: Labour force sector composition — 2010 baseline vs 2040 target. Agriculture's share of employment halves from 65.6% to 31%. Industry's share more than triples from 7.6% to 26%, absorbing Uganda's growing young workforce.

Sector	2010 Baseline (% of Labour Force)	2040 Target	Shift
Agriculture	65.6%	31.0%	–34.6pp
Industry	7.6%	26.0%	+18.4pp
Services	26.8%	43.0%	+16.2pp

With approximately 65.6% of Uganda's labour force in agriculture in 2010 — most at subsistence level — the labour force transformation is the human face of the 10-Fold Growth Strategy. As agro-industrialisation and manufacturing grow, workers must transition from subsistence farming to formal employment in industry and services. This requires: vocational training aligned to industrial needs; the National Human Resource Development Plan (NHRDP) that accompanies NDPIV; centralised university admission to prioritise skills in demand; and a National Talent Register to track and deploy Uganda's skilled workforce. NDPIV's target of creating 885,000 formal jobs per year is the quantified expression of this labour transition imperative.

Data Sources: *National Planning Authority (NPA) — Presentation at NRM Parliamentary Caucus Retreat, National Leadership Institute Kyankwanzi, April 2026 | Prof. Pamela K. Mbabazi | Uganda Vision 2040 | Fourth National Development Plan (NDPIV) FY2025/26–2029/30 | Comprehensive Integrated National Development Planning Framework (CNDPF)*
